

Policy Compliance Audit Report

Agentic Internal Lab - Experiment 2

Generated: September 21, 2026

Rule-Based Evaluation with Synthetic Data

1. Executive Summary

This report presents the findings of an automated policy compliance audit conducted on September 21, 2026. The agent evaluated 225 compliance checks across 15 policy rules spanning 5 categories.

Overall Compliance Score: 71.15%

Total Violations Detected: 225

Risk Assessment: NEEDS IMPROVEMENT

2. Methodology

This audit employs a rule-based evaluation methodology. Each policy rule is defined as a structured object containing:

- A unique rule identifier and descriptive name
- Category classification (Data Privacy, Access Control, Financial, HR, IT Security)
- Severity level (CRITICAL, HIGH, MEDIUM, LOW)
- A deterministic check function that evaluates records against the policy
- A prescribed remediation action

Synthetic data was generated using the Faker library with a fixed random seed (42) for reproducibility. Approximately 30% of records were intentionally generated as non-compliant to validate the agent's detection capabilities.

Data volumes evaluated:

- 50 employee records (6 HR/Access Control rules)
- 100 financial transaction records (3 financial rules)
- 30 IT system records (3 IT security rules)
- 80 data privacy records (3 data privacy rules)
